## ARTICLE MASTER

### Transcoding

Based on the Request for Quotation (RFQ) provided by customers, we check if there are similar articles. We check the product description and details such as materials, specifications, and others.

### Article Creation

Following successful transcoding, we create new articles. We gather and enter the data containing product description, technical specifications, and other article attributes in ERP system to create new articles.

### Attribute Maintenance

We maintain the article attributes by identifying the incorrect or missing attributes in ERP system. Upon identification, we enter the correct and missing attributes as per the article description and the international norms such as DIN EN ISO 9001.

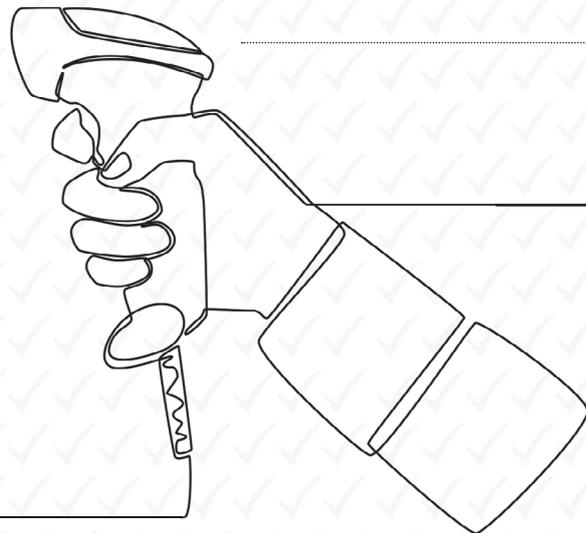

### Document Management

We upload the supportive documents with correct attributes in ERP system. These supportive documents are drawings, specification sheets, technical data sheets, and others. We carry out the tasks such as reviewing and updating the documents regularly.

### Standardization

We carry out a detailed analysis of the article portfolio for customers. We replace the special articles with the standard articles.

Along with these services, we provide a wide range of services to cater to your specific business requirements.
